Reviews

This book might be really worth a read, and superior to other. This really is for all who statte there had not been a really worth studying. I am just happy to tell you that this is basically the very best pdf i actually have read through during my very own lifestyle and may be he best ebook for actually.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 24 pages. OCLC Number: (OCoLC)52965807 Subject: Buffeting (Aerodynamics) Excerpt: . . . 7. 0 ControlLawDesignForAlleviatingVerticalTail Buffeting Using the open-loop frequency response functions obtained during the test, control laws were designed using frequency domain compensation methods 21 . These control laws were single-input, single-output control laws that utilized either a tip accelerometer or a root strain gage as the sensor to alleviate the response in the first bending mode. Because of some uncertainty in the measurement of the response created by the buffet at the worst case condition of 34 degrees angle of attack, the control laws were designed based on the open-loop frequency response functions acquired at the lower angles of attack where the buffet, and the uncertainty in the plant, were much less. The components of the active control system, shown in figure 9, include an analog-to-digital converter (A D), a digital controller 18 in which the control law is implemented, and a digital-to-analog (D A) convener. Since there were time delays associated with the digital controller and the actuator, the best approach to control law design was to take advantage of these phase lags. By lagging accelerations by ninety degrees of phase, the commanded motion of the actuator may provide damping to reduce the buffeting of the tail. For the piezoelectric actuators, the digital controller and the distance between the power amplifiers and the actuators were the major contributors to the phase lags. Because the frequency of the first bending mode was higher at the lower angles of attack, as shown in figure 10, the control law was designed to provide a total lag of 90 degrees at the frequency of the first bending mode expected at the higher angles of...
